DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 23-25, 28-45, drawn to a method of in vitro screening a transdominant agent.
- II. Claims 26-45, drawn to a method of in vitro screening a target molecule that binds a transdominant agent.
- III. Claims 46-49, drawn to a method of in vitro screening using a second plurality of cells.
- IV. Claim 50, drawn to a method of in vitro screening using a library of retroviral vectors.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to distinct methods with different method steps utilizing different reagents, modes of operation and

Art Unit: 1639

resulting in different effects. The prior art as a whole would anticipate one method but not render obvious the other methods.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and the search required for Group I is not required for Groups II, III and IV, particularly with respect to literature searches, restriction for examination purposes as indicated is proper.

Claims 23, 26 and 43 are generic to a plurality of disclosed patentably distinct species comprising:

If Group I or II or III is elected, elect one species from:

Fusion Partner:

- a. Presentation sequence
- b. Rescue sequence
- c. Stability
- d. Dimerization
- e. Targeting sequence, if elected, elect the

following species as recited in claim 43:

- ee1. Localizing signal sequence (43a)
- ee2. Membrane-anchoring (43b)
- ee3. Secretory signal (43c)
- ee4. Nuclear localization (44)

ee5. Myristylation (45)

Each of these molecular species differs in structure and in their mode of action and effects. Hence, the patentability determinations of each of the species are different.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must

be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
